Our enterprise became the owner of the Gold Medal and the title
of "Industry Leader 2021"

2022

GMP Certificate of Compliance

The company "KazBAD" offers a comprehensive proposal for manufacturing services, carried out by order of external companies (cosmetics, pharmaceuticals, food industry, etc.). We have our own production workshop, which allows us to produce capsules and blisters, dosages of liquid masses. The working environment is organized in accordance with the guidelines of the implemented quality systems and hygienic production conditions. Cooperation with well-equipped external laboratories allows developing innovative products and determining their required quality parameters. Product documentation developed in our factory complies with strict legal and formal requirements according to the category. We offer competitive prices and high quality manufacturing services.

CONTRACT MANUFACTURING

Contract manufacturing is the production of products to order at the production sites of an independent manufacturer, which ensures full compliance with the technological cycle and quality control of finished products in accordance with customer requirements.

Today, there are two types of contract manufacturing:

- performance of individual technological operations;
- implementation of the full production cycle.

In the first case, several manufacturing enterprises can take part in the production process at once. Their area of responsibility is strict compliance with the customer's requirements for the technological process, and the customer is responsible for the supply of raw materials and components, transportation, storage and sale of products, and the implementation of the relationship between different production cycles. In the case of concluding a contract for a full cycle of manufacturing goods, the customer only needs to receive the finished product from the manufacturer.

Contract enterprises can also be divided into two groups:

- fully specialized in contract manufacturing;
- in addition to contract manufacturing, they produce products under their own brands.

Currently, retail chains, cosmetics, pharmaceutical companies, electronics and mechanical engineering companies often resort to contract manufacturing.

BENEFITS FOR THE CUSTOMER

1. Embodiment of your ideas in case of insufficiency of your own knowledge and resources. The main advantage of manufacturing products by third-party organizations is savings on equipment, rent or purchase of production and storage facilities. In addition, the released funds can be used to improve the sales system or create new products.
2. Ability to focus on promotion. By entrusting the production to professional performers, the company will be able to save time and resources, pay more attention to marketing and sales. In today's dynamically developing market, the loss of time is fraught with loss in competition, and contract manufacturing speeds up the process of bringing new products to market.
3. Cost reduction and predictable budget due to fixed cost. Contract manufacturing, according to experts, can reduce costs by at least 25-30%.
4. An increase in profitability due to a decrease in the purchase price leads to an increase in loyal consumers of products.
5. Turning to specialists who carry out contract manufacturing and are well acquainted with the technology of production processes, the customer gains experience in the development of new types of products, which reduces the time for the transition to serial production of new products and increases competitiveness.

ADVANTAGES OF WORKING WITH KazBAD LLP:

When ordering over 200,000 tenge, customers can use the following certificates for free:

1. **HALAL CERTIFICATE** - confirms that the entire cycle production of Halal products and services is carried out in accordance with international standards: MS 1500-2009 guidelines for the production, manufacture, processing and storage of Halal products, IHI-Alliance standards: IHIA-0200:2010; IHIA-0600:2010; a set of food international standards "Codex Alimentarius CAC / GL 24-1997" and EC Halal-01:2012 standards. Certificates of Halal industry of Kazakhstan are recognized in 68 countries of the world.

2. **ACCP (ISO 22000)** - certifies the compliance of food production with the standards approved by ISO 22000-2006 (ISO 22000:2005) "Food Safety Management System. The HACCP system is the organizational structure of production, consisting of documents, production processes and resources necessary for the implementation of HACCP

This system provides control at all stages of food production, at any point in the process of production, storage and sale of products where dangerous situations may arise and is mainly used by food manufacturers. At the same time, special attention is paid to critical control points, at which all types of risks associated with the use of food products can be prevented, eliminated or reduced to an acceptable level as a result of targeted control measures.

3. **ISO 9001** - a certificate of conformity confirms that the organization's quality management system complies with requirements of the international standard ST RK ISO 9001-2016 (ISO 9001:2016).

4. **ECO 2019** certificate is a document confirming the environmental safety of products and production. Eco-label "ECO" - a sign that can be found on packages of Kazakh and foreign goods supplied to the Republic of Kazakhstan. The eco-label "ECO" indicates that during the production of such goods all types of harmful effects on the environment are controlled and, if possible, minimized, and also that the goods themselves have undergone minimal harmful effect. Eco-label "ECO" is assigned to products that have passed a 3-stage examination according to a special procedure, for a certain period of time with a mandatory systematic verification of compliance with the conditions set by the examination. This appropriation system trademark "ECO" excludes both the purchase and forgery of this marking. The ECO sign has a trademark certificate of the Committee for Intellectual Property Rights of the MINISTRY OF JUSTICE OF THE REPUBLIC OF KAZAKHSTAN. The sign is depicted and applied to products in accordance with the following Kazakhstani standards: ST U 40331327-01-2007 "Environmental labeling. Sign of compliance with environmentally friendly products. Technical requirements" and STU 40331327-02-2007 "Environmental labeling. The procedure for marking the mark of conformity with environmentally friendly products. The sign "ECO" looks like a ball of the Earth, covered by circular arrows, with the name "ECO" inside and with the inscription between the circles "Kazakhstan" and "Ekologiyalyk taza onim" in the Kazakh language. The sign can be made in three or one color.

5. Design of a barcode. We can issue a barcode international sample GS-1.

6. Consultation on registration of permits for each product.

6.1. Declaration of conformity for food products

6.2. State registration for dietary supplements;

6.3. Patenting. A security document certifying authorship, priority and the existence of an exclusive right.

OUR SERVICES:

PACKAGING OF BULK AND SMALL GOODS

Beautiful and durable packaging of products is a guarantee of preserving their taste and aroma properties, as well as a guarantee of long-term storage. At the same time, products can have a variety of configurations and designs - from standard transparent film to packaging with color printing and factory marking.

Packing in bags has the following advantages:

- Small specific weight.
- Convenience in warehousing and transportation of such containers.
- Protection of goods from oxygen, moisture, ultraviolet rays and other environmental influences.

FEATURES OF PACKAGING BULK PRODUCTS

Product packaging is an important set of activities that require the use of special equipment that ensures accuracy and high speed of work. Bulk packaging has the following features:

- involves the use of a dispenser that provides dosage by weight or volume;
- devices are high performance;
- all products must have appropriate hygiene certificates;
- a reliable packaging solution is used, which is of high quality and ensures the protection of products;
- equipment is easy to manage

PACKAGING (FILLING) OF LIQUID AND PASTE PRODUCTS

KazBAD LLP provides services for portion packing of liquids, creams, gels, paste products and household chemicals in plastic, glass and metal tubes (jars) from 10 ml to 500 ml.

PACKING IN CARTON PACKS

For bulk products after processing, subsequent packaging in cartons or flexible packaging, or the solution that best suits the strategy of the brand or brand, is required. Specialized packaging services are provided by the KazBAD company, which offers cooperation on favorable and convenient terms for the client.

PACKING IN SASH PACKAGE

For spices, sugar, coffee, instant cereals and other bulk products, packaging is carried out in sachets - flat three-seam bags that can be of various sizes. This service is offered at a reasonable price by the KazBAD company, which has modern technical equipment at its disposal. We quickly carry out the packaging of products, so many enterprises turn to us. The cost of our services is much lower than the costs that the client will incur when starting his own production site because the fixed costs of production and administration at the co-packer are distributed evenly among all clients, and in the case of in-house production, the fixed costs are entirely the costs of the owner of the trademark or brand.

ENCAPSULATION

Our company provides services for the encapsulation of various powder-like fillers (extracts, vitamins, minerals) into a hard gelatin capsule. At the request of the customer, in accordance with the requirements for their subsequent packaging in a PVC blister or in a plastic bottle, we can assist in selecting the size and color of the capsules. Beef hard gelatin capsules have a number of advantages over tablets. Halal gelatin capsule masks the unpleasant smell and taste of drugs, protects the main substances from external influences, provides ease of administration and accurately doses the active ingredients, is absorbed by the body one and a half times faster than the tablet form.

Capacity of hard gelatin capsules:

Capsule size	1
Average capsule capacity, mg	0,385

BLISTERING

KazBAD LLP provides blistering services for dietary supplements to companies that do not have their own production facilities and relevant permits, but who want to produce their own product.

HEAT SHRINK

Packaging of goods with the use of shrink (polyethylene or POF) film allows you to preserve the exquisite appearance of the product and ensure its reliable protection from mechanical damage and harmful environmental influences during storage and transportation.

Film packaging preserves the factory quality of the product and emphasizes its advantages. Without the use of shrink packaging, it is impossible to imagine the modern retail market.

Shrink wrapping services are very common, but only a few companies accept orders for packaging small quantities of products. more time and money are spent on the selection of the appropriate type of film and thermal packaging modes and, naturally, the cost of the service becomes quite expensive. The process of packaging products in a polyolefin sleeve is made on special thermal packaging equipment, where, under the influence of heated air, the formed package shrinks with the packaged product placed in it.

Previously, the operator puts the object in a half-sleeve of shrink film and moves it to the working area of the machine. Next, an angle welding knife is lowered, which seals and cuts off the formed package.

Depending on the size of the product, experts select the appropriate type of film and its thickness. The welding temperature of the seams is selected individually. As a rule, the product is in a shrink chamber or tunnel for no more than 2 seconds and during this time it does not have time to heat up.

It is very easy to apply a self-adhesive label to the products after packaging.

PROMO COPAKING (MANIPULATION SERVICES)

PROMO COPAKING (MANIPULATION SERVICES) Not only the safety of products during transportation and storage, but also the level of sales of these products depends on the quality and convenience of packaging. This is a kind of visiting card of the product, because it creates the first impression of the manufacturer. That is why it is important to choose the best packaging option, which will take into account the characteristics of a particular product and demonstrate it from the best side. Promo co-packing is an excellent marketing ploy, it helps to promote a new product and allows you to increase the volume of purchases of existing ones.

ADVANTAGES OF CO-PACKING

- Using the services of our company, you can save a lot, because you will not need to invest in the organization and maintenance of equipment for packing and packaging goods.
- We can offer you a modern technical base and production facilities for the development and manufacture of high-quality and original, individual packaging that will adequately represent your products on the market.
- Co-packing is a great way to maneuver the introduction of a new product to the market, choosing the most appropriate method and form for this: wrapping a gift or novelty with already popular products, or selling three items for the price of two.

MARKING

Marking is a procedure established by law.

It implies the application of special equipment - daters, markers - a certain code, which contains information about the product, its manufacturer, production date and shelf life.

We have high-precision tools and qualified employees, so the packaging is labeled clearly, accurately and as soon as possible. Technological equipment allows us to carry out the process with a high degree of resistance to various influences.

Climatic conditions, conditions of storage and transportation - the labeling of the goods remains intact.

The applied image cannot be washed off, erased - a high level of protection guarantees the immutability and accuracy of the information.

FOILING

One of the most successful sealing methods is induction foil sealing. The use of this method is possible for almost any type of product, both pharmaceutical, food and technical, up to fuels and lubricants, and the sealing achieved in this case, depending on the type of liner used, can be maintained at an internal pressure in the container up to several atmospheres.

The essence of the induction sealing technology is to fuse a layer of aluminum foil with the edge of the neck of a food container by means of induction heating of this foil.

STICKER

There are two types of modern stickers:

- 1) automated;
- 2) manual.

Basically, the application of stickers and stickers on the surface of the goods is carried out using special machines, but in some cases, manual labor is used to achieve a better result.

EQUIPMENT

The service of assembly and assembly understands a very wide field of activity.

In the KazBAD company, this is, first of all, manual labor. The seeming simplicity of manual labor is erroneous.

Manual labor in packaging is a complex process that requires responsibility, patience and accuracy.

HOW WE CAN BE USEFUL TO YOU:

- MANUAL ASSEMBLY OF BOXES, PROMO SETS;
- COMPLETE GROUP FOR DIFFERENT GOODS;
- ASSEMBLY AND PACKAGING OF SETS;
- COMPLETE SALES KITS;
- INSERT AND PACKAGING IN MAGAZINES, CATALOGS, ADVERTISING BROCHURES.

STERILIZATION OF PRODUCTS

In the world that surrounds us, there is an incredible amount of harmful bacteria and microorganisms. Their vital activity can greatly harm the human body.

Sterilization is the complete destruction of all microorganisms and bacteria that can be located both on the surface and inside the object being sterilized.

When carrying out sterilization, we use the most popular and common cleaning method: sterilization of objects with hot air (dry heat). Hot dry air is able to have an effective virocidal, bactericidal and sporicidal effect.

Disinfection in a dry-heat cabinet is one of the methods of general medical sterilization.

Under the influence of hot temperature, 100% death of all bacterial cells, fungal species and viruses occurs. Death occurs as a result of combustion of these cells and spores or coagulation of protein compounds.

STERILE PACKAGING

Sterile packaging provides tear strength, durability, breathability and superior microbial barrier. All these qualities make it possible to create sterile packaging that maintains the sterility of medical devices throughout their entire service life.

Unlike medical paper and film, sterile packaging is compatible with all of the most common sterilization methods, including ethylene oxide (EO), gamma irradiation, electron beam, controlled steam, and low temperature oxidative sterilization. Due to the characteristics of the material, sterilizing gases and steam can easily penetrate inside packaging and quickly exit it.

STORAGE

Our company uses separate areas for the storage of raw materials, packaging materials and finished products. The required temperature regime and average humidity regime are maintained.

PREMIXES

The company "KazBAD" produces and sells high-quality specialized vitamin and mineral mixtures for the production of dietary supplements, food enrichment in various sectors of the food industry.

1. Ready-made vitamin and mineral complexes
2. Development of an exclusive premix recipe
3. Production of premixes according to your recipe
